

A longitudinal study of imaging biomarkers in amyotrophic lateral sclerosis (ALS) and primary lateral sclerosis (PLS)

Status: Recruiting

Eligibility Criteria

Age: 18 years and over

This study is NOT accepting healthy

Healthy Volunteers: volunteers

Inclusion Criteria:

- 21 to 75 years old - diagnosis of possible, laboratory-supported probable, probable, or definite ALS or PLS

Exclusion Criteria:

- other neurodegenerative diseases (Parkinson disease, Alzheimer's disease, etc). - inability to undergo MRI scanning - needs assistance to walk or climb stairs

Conditions & Interventions

Conditions:

Rare Diseases, Brain & Nervous System

Keywords:

ALS, Amyotrophic Lateral Sclerosis, Primary Lateral Sclerosis

More Information

Description: The purpose of the study is to test new biomarkers of amyotrophic lateral sclerosis (ALS) and primary lateral sclerosis (PLS) using MRI scans at 3 tesla (3T). Identifying biomarkers of a disease can lead to a better understanding of the disease as well as improved treatments.
