

## The role of cytomegalovirus and inflammation on patient symptoms and outcomes in ovarian cancer

**Status:** Recruiting

### Eligibility Criteria

**Age:** 18 years and over

This study is NOT accepting healthy

**Healthy Volunteers:** volunteers

#### Inclusion Criteria:

- at least 18 years old - able to read and write in English - newly diagnosed with ovarian, primary peritoneal, or fallopian tube cancer - treatment plan includes chemotherapy - either within 2 years of completing initial chemotherapy or haven't started chemotherapy

---

#### Exclusion Criteria:

- previously had chemotherapy - in hospice or nursing home

### Conditions & Interventions

#### Conditions:

Cancer, Women's Health

#### Keywords:

Clinics and Surgery Center (CSC), CMV, cytomegalovirus, Ovarian Cancer

### More Information

**Description:** We are looking at the relationship between cytomegalovirus (CMV) and the symptoms reported by women who received chemotherapy for ovarian cancer. We are also looking at specific blood tests and their association with women's symptoms and cancer recurrence.
