

MT2012-11C: Second or Greater Allogeneic Hematopoietic Stem Cell Transplant Using Reduced Intensity Conditioning (RIC)

Status: Recruiting

[Eligibility Criteria](#)

[Conditions & Interventions](#)

More Information

Description: This is a treatment guideline for a second or greater allogeneic hematopoietic stem cell transplant (HSCT) using a reduced intensity conditioning (RIC) regimen. This regimen, consisting of busulfan, fludarabine, and low dose total body irradiation (TBI), is designed to promote engraftment in patients who failed to achieve an acceptable level of donor-derived engraftment following a previous allogeneic HSCT. While it will primarily be applied for the treatment of non-malignant diseases (NMD), on occasion it may be used to treat patients with malignant disorders as well.
