

## Stress Response and Opioid Dysfunction in Nicotine Dependence

**Status:** Recruiting

### Eligibility Criteria

**Age:** 18 years and over

This study is NOT accepting healthy

**Healthy Volunteers:** volunteers

**Inclusion Criteria:**

- Live in Minnesota. - Between 18-70 years old. - Generally healthy. - Want to quit using tobacco and nicotine. - Are willing to attend up to 11 online (videoconference) study visits over a period of approximately 4 months (though you may be asked to complete the last visits over a period of up to 1 year).

---

**Exclusion Criteria:**

- Do not live in Minnesota. - Not between 18-70 years old. - Not willing to attend to up to 11 online (videoconference) study visits over a period of approximately 4 months.

### Conditions & Interventions

**Conditions:**

Heart & Vascular, Mental Health & Addiction, Prevention & Wellness

**Keywords:**

cigarette, nicotine, quit smoking, smoker, smoking, smoking cessation, stress, tobacco

### More Information

**Description:** This study includes healthy adults between 18-70 years old who are either non-smokers or cigarette smokers interested in quitting. The purpose of this study is to learn more about how people respond to stress and to taking one dose of a widely and safely used drug called naltrexone as well as to learn about how these responses relate to whether or not someone smokes, smoking cessation, and smoking relapse.
