

Validation of Visual Stimuli for Eating Disorders Research

Status: Recruiting

Eligibility Criteria

Age: 18 years and over

This study is also accepting healthy

Healthy Volunteers: volunteers

Inclusion Criteria:

1. At least 18 years old 2. Currently have an eating disorder and/or in treatment for eating disorder 3. Engage in restrictive eating patterns 4. For healthy participants: no diagnosis of eating disorder or restrictive eating patterns

Exclusion Criteria:

1. Unable to read English language fluently

Conditions & Interventions

Conditions:

Mental Health & Addiction

Keywords:

Anorexia Nervosa, Bulimia Nervosa, Eating Disorders, Restrictive Eating

More Information

Description: The goal of this study is to identify food and body images that may cause strong emotional responses among individuals with eating and weight-related concerns. Specifically, the researchers are looking to identify a set of food images and body images that can be used in future research studies to examine differences in emotion-based reactions between individuals with and without eating disorder symptoms. Ultimately, this knowledge may help us better understand food and body-related emotional processes that might contribute to eating disorder attitudes and behaviors.
