

## Observational Study of Pediatric Rheumatic Diseases: The CARRA Registry

**Status:** Recruiting

### Eligibility Criteria

**Age:** Not specified

This study is NOT accepting healthy

**Healthy Volunteers:** volunteers

**Inclusion Criteria:**

- diagnosed with rheumatic disease prior to age 16 years for juvenile idiopathic arthritis (JIA) - onset prior to age 19 years for all other rheumatic diseases - younger than 21 years

### Conditions & Interventions

**Conditions:**

Arthritis & Rheumatic Diseases, Cancer

**Keywords:**

juvenile idiopathic arthritis (JIA), pediatric rheumatic disease

### More Information

**Description:** The primary objective for this observational study is to collect general and medical data from children, adolescents, and young adults who had pediatric onset rheumatic disease. This data will be used to evaluate the long-term safety and efficacy of therapeutic agents used to treat these diseases. This information will allow investigators to accurately report and follow changes in current medication use patterns and compare these to proposed standards and current treatment recommendations. The use of a single registry will allow for more analysis of the different therapeutic agents by allowing them to be compared to each other.
